About me

AI & ML Engineer with hands-on experience in predictive modeling, data analysis, and intelligent system development. Skilled in building and evaluating machine learning models, computer vision solutions, and AI-powered applications. Strong in Python with full-stack integration using React and Node.js, focused on responsible AI and real-world impact.

Higher Secondary Certificate

Tuljaram Chaturchand College of Arts, Science and Commerce, Baramati, Pune

2021 – 2023

BE Artificial Intelligence and Data Science

Datta Meghe College of Engineering, Airoli, Mumbai

2023-2027

Skills

- Python Programming for AI
- Machine Learning & Predictive Modeling
- Computer Vision & Image Processing
- Computer Vision & Image Processing
- Deep Learning & Neural Networks
- Full-Stack Web Development

Certificates

 **Learn Generative AI**
Edubridgeindia(Capgemini)

 **Data Visualisation: Empowering Business**
The Forge(TATA Group)

 **GenAI Powered Data Analytics Job Simulation**
The Forge(TATA Group).

 **Investment Banking**
The Forge(Bank of America)

Internship

- Project based Internship as “**Artificial Intelligence Intern**” by **istop.ai** (powered by **wipro dice**)- Gained hands-on experience in developing AI-based projects, applying machine learning concepts to real-world problem statements.  03/2025 – 04/2025
Benglore, India
- **AI-ML Virtual Internship** by **eduskill.**  10/2024 – 12/2024

Projects

Driver Drowsiness Detection System:

2025

- Developed a real-time Driver Drowsiness Detection System using OpenCV and MediaPipe to monitor eye openness and detect fatigue through facial landmarks..
- Implemented an audio alert mechanism to warn drivers instantly upon detecting drowsiness, improving road safety and accident prevention.
- **Technology used:**
Python, OpenCV, MediaPipe, NumPy, Pygame
- **Repository:-** 

Hospital Data Text Classification using TensorFlow:

2024

- This project demonstrates a machine learning pipeline to classify hospital-related textual data using TensorFlow. The dataset contains patient/hospital records (anonymized), and the goal is to classify the text into categories such as diagnosis, treatment type, department, etc.
- **Technology used:**
Python, TensorFlow, Keras, Pandas, NumPy, Matplotlib, Scikit-learn
- **Repository:-** 

Language

English,Hindi,Marathi
